How to Implement End-to-End Financial Analysis for a Firm using Large Language Models (LLMs) and Gen AI Problem Statement Financial analysis is complex . Financial analysis is complicated . Financial analysis charters into the world of multi dimensional analysis and evaluation of an entire organization through series of complex KPIs. Unlike other processes where we try to solve a single unit of work — financial analysis can have multiple dimensions and each needs a special process and procedure to quantify outcomes. In this blog- let us focus on and try to understand the complexity of designing an end to end financial analysis solution. Financial analysis at the minimum needs to solve for : balance sheet reviews income statement reviews cashflow analysis comparison with industry benchmarks trend analysis working capital analysis liquidity analysis profitability analysis solvency analysis efficiency analysis break even analysis cashflow analysis capital structure analysis SWOT analysis scenario analysis customer acquisition analysis customer lifetime value...
